

**Courant**  
VERTICAL LIVING

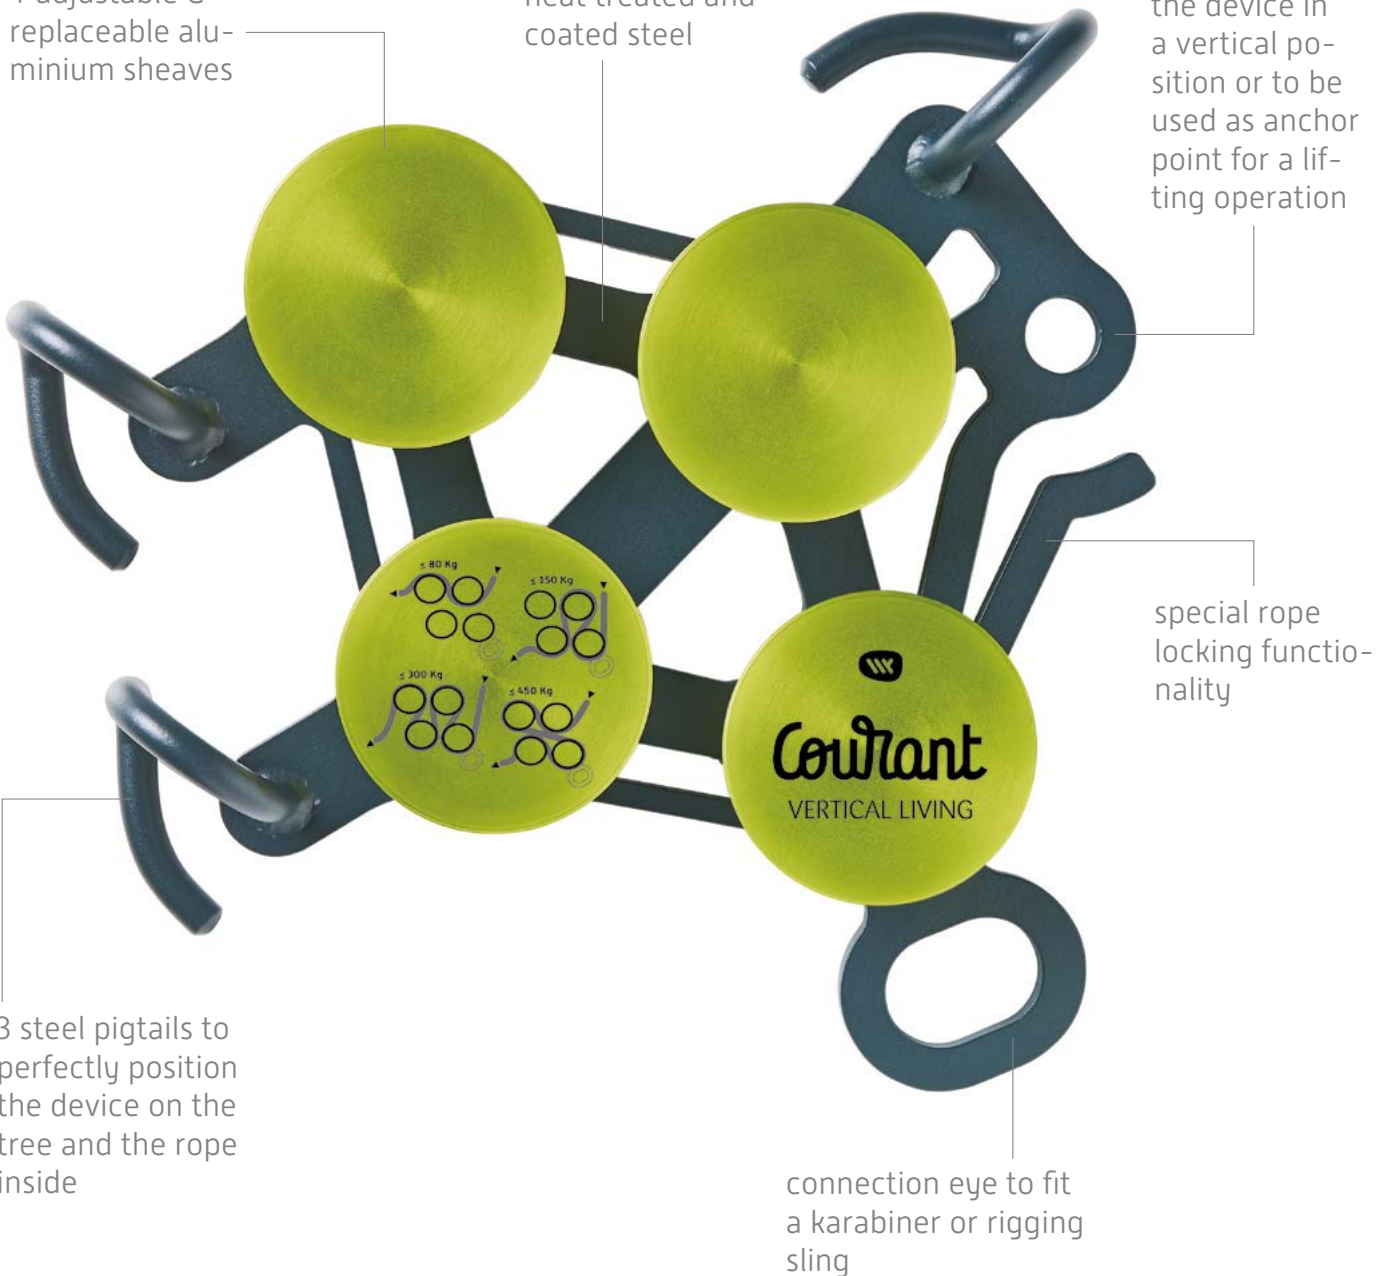

# HULK

## LOWERING DEVICE

4 adjustable & replaceable aluminium sheaves

heat treated and coated steel

connection eye for holding the device in a vertical position or to be used as anchor point for a lifting operation

special rope locking functionality

3 steel pigtails to perfectly position the device on the tree and the rope inside

connection eye to fit a karabiner or rigging sling

## USE

By using the 4 sheaves in different setup you can quickly change the amount of friction related to your job requirements so you have a very wide range of load coverage starting from 10 up to 500 kg.

The Hulk floating lowering device is a new and innovative piece of equipment that will further improve your lowering capabilities in simple or more complex situations, where it also has a positive effect on the lifetime of your lowering ropes. It's very simple and intuitive to use and thanks to the four adjustable & replaceable aluminium sheaves it provides a smooth and controlled descent of medium to more heavy branches and logs where rope twist and 'rope against rope' wear is a thing of the past.

MBS : 25 kN

WLL : 5 kN

Weight : 4.3 kg

Maximum rope diameter : 14 mm

CE Certification & Patent pending
